Description:

The objective of the Green Belt training is to provide Air Force total force military and civilian members with knowledge on Lean, Six Sigma, Theory of Constraints, Plan Do Check Act, facilitation techniques, and practical problem solving to facilitate their CPI development and Green Belt certification. The eLearning is intended to standardize and broaden AF capability to establish an innovation and improvement environment that is more capable of identifying, evaluating, testing, and scaling improvement opportunities across the Air Force and beyond to produce more effective and efficient outcomes that result in excellence in all we do. Also, please don't forget that our long-term goal is to establish CPI as a fundamental skill Airmen relentlessly use in pursuit of more effective and efficient outcomes in every task, process, and organization across the Air Force.

The eLearning course fulfills the knowledge requirement for Green Belt certification within a year of completion. Green Belt trained practitioners should continue to work with certified Green Belts and Black Belts to pursue certification and mastery of continuous process improvement. The Green Belt course provides the foundation of knowledge all Airman need to innovate and improve every task, process, and organization across the Air Force..

Target Population:

- All Air Force total force military members
- All Air Force total force civilian members (Not Contractors)

Air Force Institutional Competencies Addressed:

- Managing Organizations and Resources
 - Continuous Improvement
- Strategic Thinking
 - Decision Making
 - Critical Thinking
 - Improving the Unit

Funding:

- Course curriculum is provided by SAF/MG
- Host unit: Responsible for providing the resources to mentor local participants (Facilities, material, and supplies)
- Participant's home unit: Responsible providing Airman time to complete.
